Introduction

- **Voice-Controlled YouTube Assistant** has the objective to enhance the user experience on YouTube through speech processing technologies. Our assistant integrates **Rasa** for natural language understanding and the **IEETA Multimodal Framework** for speech processing, combined with **Selenium/WebDriver** to automate various YouTube functionalities, allowing hands-free control of the platform.
- Through this presentation, we will talk about:
 - **Functionalities**
 - **Entities**
 - **Regex**
 - **Demo**

Functionalities

1. Subscribe Channels
2. Save Videos in playlists
3. Share Video (Whatsapp)
4. Activate/Deactivate Subtitles
5. Play/Stop Videos
6. Activate/Deactivate Sound
7. Seek Forward and Seek Backward
8. Search Videos
9. Video Speed Adjustment
10. Write Comments
11. Help Command
12. Shutdown the Assistant

Entities

We have **7 entities**:

- **video**: Used to Search Videos
- **comment**: Used for Writing Comments
- **time**: Used to set the time for the Seek Forward and Seek Backward
- **user**: Used to Share Video (through Whatsapp) with a person
- **playlist**: Used to Save Videos in the chosen playlist
- **speed**: Used for Video Speed Adjustment
- **chosen_video**: Used to Choose one of the Top 3 listed items (it can be a list of Videos or Contacts)

```
entities:  
- video  
- comment  
- time  
- user  
- playlist  
- speed  
- chosen_item
```

Regex

```
- regex: time
  examples: |
    - [0-9]+ (segundos|segundo|minutos|minuto|hora|horas)
```

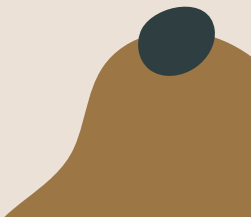

This regular expression identifies time patterns in the format:

- [0-9]+ (seconds|second|minutes|minute|hour|hours)

What does it do?

- [0-9]+: Matches a sequence of one or more digits.
- (seconds|second|minutes|minute|hour|hours): Ensures the digits are followed by a time-related word.

Examples of matches:

- "10 seconds"
 - "1 minute"
 - "3 hours"
-
